

The Tenowo Group's Global Safety, Health, Environmental and Quality Principles

Our principles for occupational safety and health protection

1. Safety and the protection of health are always top priorities in everything we do!
2. Each and every employee is responsible for their own safety, the safety of their colleagues and is aware of their function as a role model.
3. We avoid unsafe situations; when in doubt, we stop our work.
4. We identify, report and effectively mitigate all risks to safety.

Our quality principles

1. Each and every employee is responsible for the quality of our products.
2. The products we produce are of high quality, sustainable and innovative.
3. We strive to achieve continuous improvement.
4. We identify, report and effectively mitigate all risks to quality.

Our environmental and energy principles

1. We use resources responsibly and efficiently.
2. We conserve our natural resources sustainably.
3. We identify, report and effectively mitigate our environmental risks.

The success of our Corporate Principles requires the commitment and involvement of every individual who works for and with us.

The management is committed to a regular review of the way the Corporate Principles are implemented, the aims and legal requirements in which they result and the effectiveness of the management system. This helps drive the process of continuous improvement, thus facilitating the work of all of our employees.
